SYNTHETIC / ILLUSTRATIVE DATA - INVENTED FOR SIT COURSE PROJECT - NOT REAL SMF OPERATIONAL DATA

Singapore Manufacturing Federation

Member Case Study Cards

Five illustrative member journeys through EnterpriseSG and WSG support schemes

THESE COMPANIES DO NOT EXIST

All five companies, their people, figures and outcomes are invented for the SIT RAG & Agentic AI mini-project. The scheme mechanics referenced in each 'advisory lesson' are drawn from the verified text-layer advisory notes in this knowledge base, but the businesses themselves are fictional composites. This document must never be presented as a record of real SMF members.

Precision Dynamics Pte Ltd

APPROVED

Precision engineering · 48 staff · S$9.2m turnover

Scheme	Amount claimed	Support rate	Outcome in
PSG	S$28,400	50%	38 days

SITUATION

Needed an MES module to replace paper job cards across 11 CNC machines.

OUTCOME

Approved. Scrap rate fell from 4.1% to 2.3% within two quarters; quotation was pre-checked against Annex 3 before submission.

ADVISORY LESSON

The vendor initially quoted a bundled 'implementation package' that included delivery and installation. SMF advisory stripped both lines out before submission, because neither is supported under PSG.

Golden Harvest Foods Pte Ltd

APPROVED ON APPEAL

Food manufacturing · 126 staff · S$31.5m turnover

Scheme	Amount claimed	Support rate	Outcome in
EDG	S$186,000	50%	84 days

SITUATION

Bespoke integration of a new retort line with existing ERP and traceability.

OUTCOME

Approved on second attempt. First application was rejected because the member had already signed the equipment contract three weeks earlier.

ADVISORY LESSON

Gate 0 failure. The member believed signing without payment was safe. Signing a contractual agreement with a third party in the application counts as commencement and disqualifies the project outright.

SYNTHETIC / ILLUSTRATIVE DATA - INVENTED FOR SIT COURSE PROJECT - NOT REAL SMF OPERATIONAL DATA

Sterling Metal Stamping Pte Ltd

APPROVED

Metal stamping · 34 staff · S$6.8m turnover

Scheme	Amount claimed	Support rate	Outcome in
EEG	S$21,600	70%	45 days

SITUATION

Replacing a 22-year-old air compressor with a variable-speed unit.

OUTCOME

Approved under the Energy Efficiency Grant Base tier, not EDG. Measured electricity consumption fell 18.4% on the compressed-air circuit.

ADVISORY LESSON

The member first approached SMF asking about EDG Automation. Like-for-like equipment replacement is excluded under EDG unless it adds new capability, but an energy-efficient replacement is precisely what EEG exists to fund.

Apex Circuit Assembly Pte Ltd

REJECTED

Electronics assembly · 215 staff · S$58.4m turnover

Scheme	Amount claimed	Support rate	Outcome in
PSG	NIL	-	rejected day 19

SITUATION

Wanted PSG support for a warehouse management system.

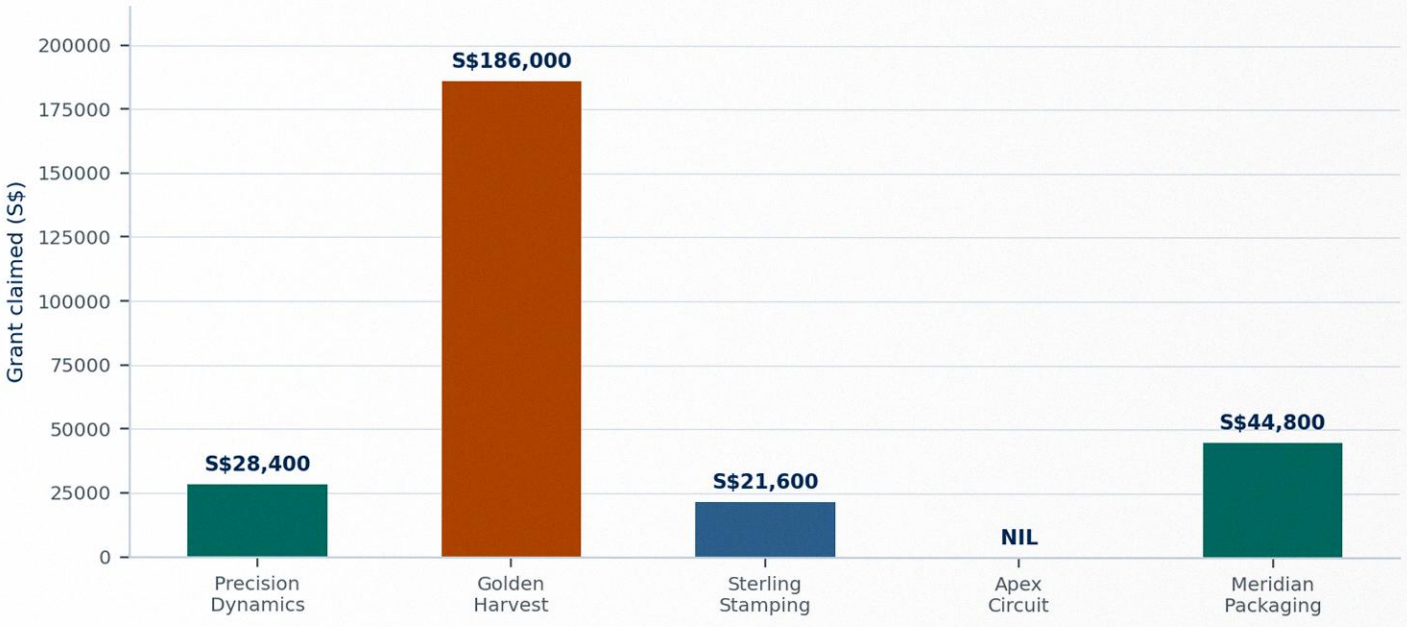

OUTCOME

Rejected. Group employment size was 215 and group turnover S$58.4m. The member failed the headcount limb of the SME test and assumed both limbs had to fail.

ADVISORY LESSON

The PSG SME test is group turnover not exceeding S$100m OR group employment not exceeding 200. It is a single test read as OR, so passing on turnover alone is enough - but this member exceeded 200 staff and their turnover was under the cap, so they still qualified. The rejection was actually caused by a deposit paid to the vendor, discovered at review.

Claimed amount by case

SYNTHETIC / ILLUSTRATIVE DATA - INVENTED FOR SIT COURSE PROJECT - NOT REAL SMF OPERATIONAL DATA

Meridian Packaging Pte Ltd

APPROVED

Packaging · 61 staff · S$12.1m turnover

Scheme	Amount claimed	Support rate	Outcome in
MRA	S$44,800	70%	51 days

SITUATION

First-time market entry into Indonesia: FTA advisory, IP registration, trade fair.

OUTCOME

Approved. Existing Indonesia sales were S$0, comfortably inside the new-market test. Claimed across two of the three MRA pillars.

ADVISORY LESSON

MRA is only for markets where the member has generated no more than S$100,000 in each of the preceding three years. A sister enquiry for Vietnam was declined because that market already produced S$300,000 a year.

Cross-case pattern summary

What the five journeys have in common.

Case	Scheme	Gate 0 clean?	Correct scheme first time?	Outcome
Precision Dynamics	PSG	Yes	Yes	Approved
Golden Harvest Foods	EDG	No - contract signed	Yes	Approved on appeal
Sterling Metal Stamping	EEG	Yes	No - asked about EDG	Approved
Apex Circuit Assembly	PSG	No - deposit paid	Yes	Rejected
Meridian Packaging	MRA	Yes	Yes	Approved

The pattern SMF advisory officers should take away

Two of five cases failed Gate 0, and in both instances the member believed they were still safe - one because no money had changed hands, the other because the deposit was described by the vendor as refundable. Neither distinction matters. Any payment, deposit or signed contractual agreement with a party named in the application constitutes commencement.

One of five cases arrived asking about the wrong scheme entirely. Members frame their need in terms of the equipment they want to buy, not the policy objective the purchase serves. An energy-efficient compressor sounds like automation and is actually energy efficiency. Listening for the objective rather than the object is the core advisory skill this assistant must support.

Reminder on the status of this document

Synthetic. Rendered as a rasterised image with no text layer, so the RAG pipeline must recover this content by OCR rather than direct text extraction. When the assistant draws on this document it is required to state that the case studies are illustrative, because a member who mistook these outcomes for precedent could form unrealistic expectations about approval likelihood, quantum or timeline.
